MANUFACTURES OF QUALITY GARAGE & WORKSHOP EQUIPMENT SINCE 1972

FORK BITE® FORKLIFT TRUCK ATTACHMENTS

The new CAM product range with the NEW FORK BITE® clamping mechanism (patent pending) Forget about fiddly clamping screws, messy chains and driver inconvenience, this simple design is self clamping when a load is applied to the attachment, the heavier the load the tighter the bite!

BAG BITE 2000®

The first product in the new range, the BAG BITE 2000. The BAG BITE will make those awkward bags a thing of the past, with a capacity of 2000 Kg it will eliminate the need to stand in front of the forklift truck when attaching the straps to the forks, removing a very dangerous health & safety issue.

In just 4 easy steps the bag is ready to be moved by one person:-

- Pick up the attachment.
- Drive the attachment over the bag to be lifted.
- Attach the lifting straps to the lifting ears.
- Lift the forks.

There is no need to secure the BAG BITE to the forks as the clamping mechanism is automatic, the heavier the bag the tighter the bite!

The Bag Bite comes complete with Test Certificate / Letter Of Conformity and is CE Marked.

BAG BITE 2000

For a video demonstrating the BAG BITE in use see:-
